What's NEW? Waterproof optical conn

The advancement of base station installations is increasing with the global popularization of 5G communication services. Traditionally, optical modules incorporated into base stations for communication with the core network are easily affected by heat, and once the base stations have been installed, servicing the optical module in the field is extraordinarily difficult. In addressing this challenge, JAE has developed the FO-BD7 series waterproof optical connectors.

New Product: FO-BD7D Series

- Allows for on-site assembly
- Simplified field service of optical modules at a secure nearby location

- Optimal thermal management provided by having the optical module mounted into the plug connector
- IPX7 rated ingress protection
- Outdoor environmental durability
